

## **Congratulations, your ride just got a whole lot brighter!**

Firstly, before operation, you'll need to tighten the INDIGO5 tailcap (1).

There are two programmes selectable when turning on INDIGO5: MTB and ROADIE.

### **ROADIE programme**

To turn on in ROADIE programme short click the power button.

Once on, click the button to cycle through modes: LOW-MID-HIGH-RACING HEART-DAY.

Double click the button in any mode to activate MAX mode. Single click again to return to the previous mode.

To turn off, hold the button for one second.

### **MTB programme**

To turn on in MTB programme hold down the the power button for one second.

Once on, click the button to cycle through modes: LOW-MID-HIGH.

Double click the button in any mode to activate MAX mode. Single click again to return to the previous mode.

To turn off, hold the button for one second.

### **Modes**

LOW/MED/HIGH- choose one of these constant 'on' modes to best illuminate the conditions and the speed you are travelling.

RACING HEART- perfect for riding in built up areas with street lighting and traffic, the low constant beam illuminates your way and the flash alerts other road users of your presence.

DAY- as the name suggests, day mode is best for daylight rides. It is also a powerful beacon when riding in daylight foggy conditions.

MAX- when you need as much light as possible.

MODE MEMORY- INDIGO5 remembers the mode you used last.
